2007 Radiological Environmental Operating Report

Dear Sir or Madam:

Entergy Nuclear Operations, Inc. is submitting the enclosed Radiological Environmental Operating Report for the Big Rock Point Plant. This report was prepared in accordance with the requirements of 10 CFR 50, Appendix I, Section IV.B, and Technical Specification 6.6.3. The period covered by the enclosed report is January 1, 2007, through December 31, 2007.

Summary of Commitments

This letter contains no new commitments and no revision to existing commitments.

A handwritten signature in cursive ink that reads "Laurie Lahti".

ENCLOSURE
BIG ROCK POINT PLANT
2007 RADIOLOGICAL ENVIRONMENTAL OPERATING REPORT

I. Introduction

The 2007 Big Rock Point (BRP) Annual Radiological Environmental Operating Report provides a summary and data interpretation of the BRP Radiological Environmental Monitoring Program (REMP) as conducted during the 2007 reporting period. Reporting requirements are detailed in the BRP Defueled Technical Specification, Section 6.6.3, and the Offsite Dose Calculation Manual (ODCM) Section III, Subsection 2.0.

During 2006, site decommissioning activities were completed. The last activity was the final site survey which concluded that the former BRP Nuclear Plant met the radiological criteria for unrestricted use in accordance with 10 CFR 20.1402. On April 11, 2007, the BRP license was transferred to Entergy Nuclear Palisades, LLC.

The BRP ODCM, Section III, contains the requirements for the REMP. The radiological environmental monitoring sampling requirements are greatly reduced from the plant's operating period and now encompass independent spent fuel storage installation (ISFSI) operations.

There was a revision to the ODCM in 2007 that provided clarification of which thermoluminescent dosimeters (TLDs) are required for ISFSI-only operation.

Tables 1, 2 and 3 provide a summary of 2007 BRP REMP sample requirements and results. Detailed sample station identification and location information is included in Attachment 2.

II. Discussion and Interpretation of Results

A. TLDs – Gamma Dose

The BRP Gamma Dose Assessment Program consists of 11 TLD locations: Four at the outside perimeter of the ISFSI (locations: BR-18, BR-19, BR-20 and BR-21), four at the ISFSI protected area fence line (locations: BR-22, BR-23, BR-24 and BR-25), and three control TLDs, 10.5 to 50 miles out (locations: BR-5 Petoskey, BR-6 Boyne City and BR-7 Traverse City). Environmental gamma doses are measured quarterly and annually by placement of two TLD badges per designated location. Attachment 2 provides a description and diagram of TLD locations.

For 2007 the average quarterly gamma readings were:

20.4 millirem for protected area fence TLDs,
15.2 millirem for ISFSI outside perimeter TLDs, and
17.8 millirem for the control TLD locations.

For 2007 the average annual gamma readings were:

96.8 millirem for protected area fence TLDs,
53.4 millirem for ISFSI outside perimeter TLDs, and
73.3 millirem for the control TLD locations.

The comparative evaluation of the protected area fence line quarterly TLD mean and the ISFSI outside perimeter TLD mean measured in 2007 are nominally elevated from that of 2006. This is comparable to the nominal elevation of the control TLD data for 2007.

A comparative evaluation was also completed of the 2007 offsite control TLD data to the ISFSI outside perimeter TLD data. The ISFSI outside perimeter mean, although lower than the offsite control mean, is not statistically different than the offsite control TLD mean.

Each TLD badge contains a 4-zone CaSO₂ phosphor wafer (the wafer also includes an additional backup/reserve read-out zone). Sensitivity for the multi-zone TLDs are 1.0 millirem with a linear response to 1000 rem.

B. Air Samples

The BRP REMP no longer requires that airborne surveillance be conducted.

C. Milk

The BRP REMP no longer requires that milk samples be collected.

D. Lake Water

The BRP REMP no longer requires that lake water samples be collected.

E. Drinking Water

The BRP REMP no longer requires that drinking water samples be collected.

F. Crops

The collection of food crops/vegetation is not required by the BRP REMP.

G. Sediment

The BRP REMP no longer requires that well water samples be collected.

H. Aquatic Biota

The collection of aquatic biota (algae and periphyton) is no longer required by the BRP REMP.

III. Assessment of BRP's Operational Environmental Impact

Review and comparison of the 2007 BRP radiological environmental monitoring data to previous data shows that the parameters analyzed support the conclusion that ISFSI operations have had minimal environmental impact.

Table 1. Sampling and Analysis Summary

<u>Medium</u>	<u>Description</u>	<u>Location(s)</u>	<u>Type of Analysis</u>	<u>Number of Samples Collected</u>	<u>Frequency of Analysis</u>
TLD	Continuous	BRP 18-25, 5-PT, 6-BC, 7-TR	Gamma Isotopic	44 11	Quarterly Annual ^a
Lake Water	1 gallon composite	1-ST	Tritium, Gamma Isotopic	0	No Longer Required
Well Water	1 gallon grab/composite	Site Well	Tritium, Gamma Isotopic	0	No Longer Required
Monitoring Wells	1 gallon grab	MW 1-9 Gamma Isotopic	Tritium,	0	No Longer Required
Sediment	Grab	1-ST, 24-STS, 25-STN, 26-LP	Gamma Isotopic	0	No Longer Required
Fish	Grab	1-ST Discharge	Gamma Isotopic	0	No Longer Required

Table Notes

^a Only quarterly TLD's are required per Big Rock Point ODCM

Table 2. Sample Data Summary^a

Medium or Pathway Sampled (Units)	Analysis Evaluated Versus Total Number Analyses Performed	Lower Limit of Detection (LLD) ^b	All Indicator Locations Mean ^c (Range)	All Control Locations Mean ^c (Range)	Nonroutine Measurements

3. Biota			
a. Marine	1 fish or invertebrate sample where clarified, detained water enters lake	Semiannual (grab) Apr-Nov	Gamma Isotopic Semiannually
4. Lake Sediment			
a. Shoreline	1 sample where clarified, detained water enters lake	Semiannual (grab) Apr-Nov	Gamma Isotopic Semiannually
b. Shoreline	1 sample each side of 4.a (above), within ~1/2 mile	Semiannual (grab) Apr-Nov	Gamma Isotopic Semiannually

Table 1-1 Notations

- a. Deviations are permitted from the required sampling schedule if specimens are unobtainable due to hazardous conditions, seasonal unavailability, malfunction of automatic sampling equipment and other legitimate reasons. If specimens are unobtainable due to sampling equipment malfunction, every effort shall be made to complete corrective action prior to the end of the next sampling period. All deviations from the sampling schedule shall be documented in the Annual Radiological Environmental Operating Report pursuant to the Reporting Requirements of ODCM, Section III. Alternative media and locations may be chosen for any particular pathway if designated locations or media are not available, and appropriate substitutions are made within 30 days in the radiological environmental monitoring program.
- b. One or more instruments, such as a pressurized ion chamber, for measuring and recording dose rate continuously may be used in place of, or in addition to, integrating dosimeters. The background dosimetry requirement also may be met through use of dosimeters shared with another facility, or from data provided by another entity, such as the State of Michigan, as appropriate for this site.
- c. Gamma isotopic analysis means the identification and quantification of gamma-emitting radionuclides that may be attributable to licensed materials in the effluents from the facility.
- d. For the purposes of this table, a TLD is considered to be one phosphor; two or more phosphors or phosphor readout zones in a packet are considered as two or more dosimeters.
- e. TLDs designated for ISFSI-only operation.

1 0 INTRODUCTION

The following constitutes a final 2007 Progress Report for the Radiological Environmental Monitoring Program conducted at the Entergy Nuclear Operations, Big Rock Independent Spent Fuel Storage Installation. Results of completed analyses are presented in the attached tables.

All concentrations, except gross alpha and gross beta, are decay corrected to the time of collection.

All samples were collected within the scheduled period unless noted otherwise in the Listing of Missed Samples.

APPENDIX A

INTERLABORATORY COMPARISON PROGRAM RESULTS

NOTE: Environmental Inc., Midwest Laboratory participates in intercomparison studies administered by Environmental Resources Associates, and serves as a replacement for studies conducted previously by the U.S. EPA Environmental Monitoring Systems Laboratory, Las Vegas, Nevada. Results are reported in Appendix A. TLD Intercomparison results, in-house spikes, blanks, duplicates and mixed analyte performance evaluation program results are also reported. Appendix A is updated four times a year; the complete Appendix is included in March, June, September and December monthly progress reports only.

January through December, 2007

Appendix A
Interlaboratory Comparison Program Results

Environmental, Inc., Midwest Laboratory has participated in interlaboratory comparison (crosscheck) programs since the formulation of its quality control program in December 1971. These programs are operated by agencies which supply environmental type samples containing concentrations of radionuclides known to the issuing agency but not to participant laboratories. The purpose of such a program is to provide an independent check on a laboratory's analytical procedures and to alert it of any possible problems.

Participant laboratories measure the concentration of specified radionuclides and report them to the issuing agency. Several months later, the agency reports the known values to the participant laboratories and specifies control limits. Results consistently higher or lower than the known values or outside the control limits indicate a need to check the instruments or procedures used.

Results in Table A-1 were obtained through participation in the environmental sample crosscheck program administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the U.S. EPA Environmental Monitoring Systems Laboratory, Las Vegas, Nevada.

The results in Table A-2 list results for thermoluminescent dosimeters (TLDs), via International Intercomparison of Environmental Dosimeters, when available, and internal laboratory testing.

Table A-3 lists results of the analyses on in-house "spiked" samples for the past twelve months. All samples are prepared using NIST traceable sources. Data for previous years available upon request.

Table A-4 lists results of the analyses on in-house "blank" samples for the past twelve months. Data for previous years available upon request.

Table A-5 lists REMP specific analytical results from the in-house "duplicate" program for the past twelve months. Acceptance is based on the difference of the results being less than the sum of the errors. Complete analytical data for duplicate analyses is available upon request.

The results in Table A-6 were obtained through participation in the Mixed Analyte Performance Evaluation Program.

Results in Table A-7 were obtained through participation in the environmental sample crosscheck program administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the Environmental Measurement Laboratory Quality Assessment Program (EML).

Attachment A lists acceptance criteria for "spiked" samples.

Out-of-limit results are explained directly below the result.

Attachment A

ACCEPTANCE CRITERIA FOR 'SPIKED' SAMPLES

LABORATORY PRECISION: ONE STANDARD DEVIATION VALUES FOR VARIOUS ANALYSES^a

Analysis	Level	One standard deviation for single determination
Gamma Emitters	5 to 100 pCi/liter or kg > 100 pCi/liter or kg	5.0 pCi/liter 5% of known value
Strontium-89 ^b	5 to 50 pCi/liter or kg > 50 pCi/liter or kg	5.0 pCi/liter 10% of known value
Strontium-90 ^b	2 to 30 pCi/liter or kg > 30 pCi/liter or kg	5.0 pCi/liter 10% of known value
Potassium-40	≥ 0.1 g/liter or kg	5% of known value
Gross alpha	≤ 20 pCi/liter > 20 pCi/liter	5.0 pCi/liter 25% of known value
Gross beta	≤ 100 pCi/liter > 100 pCi/liter	5.0 pCi/liter 5% of known value
Tritium	≤ 4,000 pCi/liter > 4,000 pCi/liter	± 1σ = 169.85 x (known) ^{0.0933} 10% of known value
Radium-226,-228	≥ 0.1 pCi/liter	15% of known value
Plutonium	≥ 0.1 pCi/liter, gram or sample	10% of known value
Iodine-131, Iodine-129 ^b	≤ 55 pCi/liter > 55 pCi/liter	6.0 pCi/liter 10% of known value
Uranium-238, Nickel-63 ^b	≤ 35 pCi/liter > 35 pCi/liter	6.0 pCi/liter 15% of known value
Technetium-99 ^b	—	—
Iron-55 ^b	50 to 100 pCi/liter > 100 pCi/liter	10 pCi/liter 10% of known value
Others ^b	—	20% of known value

^a Results obtained by Environmental, Inc., Midwest Laboratory as a participant in the crosscheck program for proficiency testing in drinking water conducted by Environmental Resources Associates (ERA).

^b Unless otherwise indicated, the laboratory result is given as the mean ± standard deviation, for three determinations.

^c Results are presented as the known values, expected laboratory precision (1 sigma, 1 determination) and control limits as provided by ERA.

TABLE A-2. Crosscheck program results; Thermoluminescent Dosimetry. (TLD, CaSO₄: Dy Cards).

^a Liquid sample results are reported in pCi/Liter, air filters(pCi/filter), charcoal (pCi/m³), and solid samples (pCi/g).^b Laboratory codes as follows. W (water); MI (milk); AP (air filter); SO (soil); VE (vegetation).

CH (charcoal canister), F (fish).

^c Results are based on single determinations.^d Control limits are based on Attachment A, Page A2 of this report.^e Sample recount: 12557 ± 335.

NOTE: For fish, Jello is used for the Spike matrix. For Vegetation, cabbage is used for the Spike matrix.

^a Liquid sample results are reported in pCi/Liter, air filters, pCi/filter, charcoal (pCi/charcoal canister), and solid samples (pCi/kg).^b I-131(G); iodine-131 as analyzed by gamma spectroscopy.^c Activity reported is a net activity result. For gamma spectroscopic analysis, activity detected below the LLD value is not reported.^d Low levels of Sr-80 are still detected in the environment. A concentration of (1-5 pCi/L) in milk is not unusual.

Note: Duplicate analyses are performed on every twentieth sample received in-house. Results are not listed for those analyses with activities that measure below the LLD.

^a Results are reported in units of pCi/L, except for air filters (pCi/Filter), food products, vegetation, soil, sediment (pCi/g).

^a Results obtained by Environmental, Inc., Midwest Laboratory as a participant in the Department of Energy's Mixed Analyte Performance Evaluation Program, Idaho Operations office, Idaho Falls, Idaho.

^b Results are reported in units of Bq/kg (soil), Bq/L (water) or Bq/total sample (filters, vegetation).

^c Laboratory codes as follows: STW (water), STAP (air filter), STSO (soil), STVE (vegetation).

^d MAPEP results are presented as the known values and expected laboratory precision (1 sigma, 1 determination) and control limits as defined by the MAPEP.

^e Result of reanalysis, 2.08 ± 0.13 pCi/L.

^f The test samples were recounted on lower background detectors. Result of the recounts: 41.4 ± 6.3 Bq/kg.

^a Results obtained by Environmental, Inc., Midwest Laboratory as a participant in the crosscheck program for proficiency testing administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the Environmental Measurements Laboratory Quality Assessment Program (EML).

^b Laboratory codes as follows: STW (water), STAP (air filter), STSO (soil), STVE (vegetation).

^c Unless otherwise indicated, the laboratory result is given as the mean ± standard deviation for three determinations.

^d Results are presented as the known values, expected laboratory precision (1 sigma, 1 determination) and control limits as provided by ERA.

^e A high bias (~ 20%) was observed in gamma results for air filters. A composite filter geometry was used in the calculations vs. a single filter geometry. Result of recalculation, Cs-137, 305.8 ± 6.0 pCi/filter.

^f Included in the testing series as a "false positive". No activity expected.
