{Docket #(s)}

Subject: Notification of Uncompleted ABWR ITAAC 2.14.4a Item 4a

ITAAC Statement

Design Commitment

The SGTS (Standby Gas Treatment System) maintains a negative pressure of 6.35 mm water gauge or greater in the secondary containment relative to the outdoor atmosphere within 20 minutes when the secondary containment is isolated.

Inspection/Test/Analysis

Tests will be conducted on each as-built SGTS division.

Acceptance Criteria

The SGTS maintains a negative pressure of 6.35 mm water gauge or greater in the secondary containment relative to the outdoor atmosphere within 20 minutes when the secondary containment is isolated.

Actions Achieved Toward ITAAC Closure

Progress as of (Month, Day, Year) toward completing this ITAAC was approximately 75% with the SGTS Negative Pressure Test Procedure XXX.XXX.XXX (Reference 1) and Negative Pressure Test Package (Reference 2) generated, but the test, associated inspection activities, and test analysis results remain open.

The as-built divisions of the SGTS System identified within the secondary containment negative pressure test boundaries were established by the constructor based on plant design drawings and specifications. These design documents provide design and operating temperatures and pressures which allow assembly of the SGTS Negative Pressure Test Package per Procedure XXX.XXX.XXX, Negative Pressure Testing. Negative Pressure Testing personnel are trained in accordance with the Negative Pressure Testing Procedure, and test results are analyzed, documented, and retained. The Negative Pressure Test Package (Reference 2) consists of the following:

1. Negative Pressure Test Package Index Sheet

225 Day Notification
ITAAC-ABWR 2.14.4a Item 4a

2. Negative Pressure Test Report
3. Drawing showing the SGTS system test boundary
4. Equipment List

Actions Remaining to Attain ITAAC Closure

Prior to final acceptance of the negative pressure test results of the SGTS System, a package documentation review will ensure compliance to 6.35 mm water gauge or greater in the secondary containment relative to the outdoor atmosphere within 20 minutes when the secondary containment is isolated. Any deviations identified will be resolved prior to system turnover to Start Up. The Negative Pressure Test Package documentation review by Quality Assurance is per Quality Procedure XXX (Reference 3).

Staff qualified test personnel have experience with Negative Pressure System test procedures, test packages, testing, inspections, and test analysis results. Completion of a successful test will confirm that SGTS maintains a negative pressure of 6.35 mm water gauge or greater in the secondary containment relative to the outdoor atmosphere within 20 minutes when the secondary containment is isolated.

Construction and Operations Negative Pressure Test programs are based upon procedures written and approved by Licensee (or their designee). Personnel performing the Negative Pressure Test are trained per the approved procedures. Such programs with appropriate third party inspections and documentation have been in use for industry outages for many years. These successful industry programs coupled with satisfactory negative pressure test results through (Month, Day, Year) showing completion of the major portions of this ITAAC at our facility provides confidence that [Licensee] will successfully complete this ITAAC.

ITAAC Closure Schedule

ITAAC 2.14.4 Item 4a is being tracked in the ITAAC database. ITAAC 2.14.4 Item 4a Closeout Package (Reference 4) is scheduled to be issued by [month, day, year]. The Closure Letter for ITAAC 2.14.4 Item 4a will follow our review and acceptance of these documents.
