MEETING REPORT

DATE: August 9, 2010

TIME: 10:00 a.m. to 11:00 a.m.

PLACE: U.S. Nuclear Regulatory Commission, Headquarters
Two White Flint North, Rockville, Maryland
Room T-8C5

PURPOSE: This meeting was held at the request of Target Uranium (Target) to introduce the proposed Bootheel in-situ recovery (ISR) project and discuss preliminary studies that have been performed at the site.

ATTENDEES: See Attached Attendees List.

BACKGROUND:

Target submitted a Letter of Intent to the U.S. Nuclear Regulatory Commission (NRC) staff at the beginning of the meeting (the letter is available in ADAMS under accession number ML102220481). This letter notified the staff that it intends to submit an application to operate an ISR at the Bootheel site in the Shirley Basin of Wyoming. Target anticipates submitting an application to the NRC in mid 2012.

DISCUSSION:

NRC staff read the opening statement for the meeting, and Target proceeded with its slide presentation of the project. Slides presented at this meeting are included as Attachment 3. Strata's presentation focused on the geology of the site, project timeline, environmental studies performed to date, and studies planned for 2011. At this time, Target plans to design the facility as a satellite operation and ship ion exchange resins to an off-site facility for final processing and yellowcake production. After the slide presentation, NRC staff reviewed the licensing process with Target and emphasized the need to inform the NRC staff of progress on the application and coordinate with the various State and Federal agencies involved in the review of the project. After NRC staff's discussion, the meeting was opened for questions.
