

SMR-300 Deterministic Safety Analysis Codes and Methods Overview

April 10, 2024

Presented by: Clay Lietwiler

SMR, LLC, A Holtec International Company
Krishna P. Singh Technology Campus
One Holtec Boulevard
Camden, NJ 08104, USA

[Not Export Controlled]

Meeting Agenda

- Introductions
- Purpose and Outcomes
- Background
- Computer Codes
 - ✓ Basis
 - ✓ Validation Plans
- Methods
 - ✓ Event Identification and Classification
 - ✓ Acceptance Criteria
 - ✓ Single Failures
 - ✓ LOCA Methods
 - ✓ Non-LOCA Methods
- Summary and Next Steps

Introductions

- NRC Staff
- Holtec Staff

Purpose and Outcome

PURPOSE: To provide a high-level overview of the computer codes and methods used to perform transient and accident analyses.

OUTCOME: To obtain feedback from the NRC staff and identify specific topics that the NRC would like to discuss further in future meetings.

Background – Reactor Coolant System

- SMR-300 reactor coolant system (RCS) components:
 - ✓ Reactor pressure vessel (RPV)
 - ✓ Once-through steam generator (OTSG)
 - ✓ 2 cold legs (24" diameter)
 - ✓ 2 reactor coolant pumps
 - ✓ 2 hot legs (24" diameter)
 - ✓ Integral pressurizer to OTSG
 - ✓ 69 standard "17x17" fuel assemblies
- RCS operating conditions similar to existing PWRs
 - ✓ RCS Pressure – 2250 psia
 - ✓ RCS Tavg – 578 F
 - ✓ RCS Coolant Flow Rate 12,000 lb/s
 - ✓ 1050 MWth

Background – Engineered Safety Features

- All ESF systems are passive and do not require operator action
- All ESF systems are designed such that a single failure does not inhibit an ESF system from performing its intended function
- Plant Safety System (PSS)
 - ✓ Initiates reactor trip and actuates ESF systems
- Primary Decay Heat (PDH) removal system
 - ✓ Provides core cooling to RCS primary
- Secondary Decay Heat (SDH) removal system
 - ✓ Provides core cooling via the OTSG
- Automatic Depressurization System (ADS)
 - ✓ Enables passive safety injection during LOCA
- Passive Core Makeup (PCM) water system
 - ✓ Provides RCS makeup inventory during LOCA
- Passive Containment Heat (PCH) removal system
 - ✓ Ultimate heat sink for LOCA and non-LOCA events

Passive Core Cooling Safety Systems (PCC)

Computer Codes Bases

- SMR-300 has materials, components, and operating conditions similar to licensed/operating PWR nuclear power plants, therefore computer codes used for analyses of these plants are generally applicable to the SMR-300.
- Neutronics
 - ✓ Studsvik's CMS5 Suite – CASMO5, SIMULATE5, SIMULATE-3K
 - ✓ [[]]
- Subchannel Analysis
 - ✓ Framatome's COBRA-FLX
- System Thermal Hydraulics
 - ✓ Idaho National Laboratory's (INL) RELAP5-3D
- Containment (Chapter 6.2)
 - ✓ Electric Power Research Institute's GOTHIC
- Radiological Consequences
 - ✓ Source Terms – SCALE
 - ✓ Dispersion Factors – ARCON96
 - ✓ Dose - RADTRAD

Generic Computer Code Validation Plan

- The Evaluation Model Development and Assessment Process (EMDAP) described in Regulatory Guide 1.203 will be followed for each computer code
- Holtec will leverage existing validation work where applicable

Studsvik CMS5 Validation Plan

Methods – Event Identification & Classification

■ [[

■

]]

Methods - Acceptance Criteria

■ [[

■

■

]]

Methods - Single Failures

■ [[

■

■

]]

Methods - LOCA

■ [[

■

■

■

■

]]

NON-LOCA METHODS

■ [[

■

■

]]

Summary

- Deterministic safety analysis codes and methods will adhere to regulations and follow guidance outlined by NRC
- An SMR-300 specific ISET program is being developed to support LOCA and non-LOCA EMDAP
